## COMBINATION FIXTURES

**T**he new Metcraft HET 1.28 gpf toilet is the culmination of Metcraft Industries' commitment to promote water conservation and advance plumbing technologies through investments in research and new concepts. These efforts have produced a flush valve operated toilet that surpasses the performance of low flush models and uses only 1.28 gallons of water per flush. Its powerful flush emulsifies waste and cleanly evacuates the bowl into the sewer piping with remarkable efficiency. Its patented designs provide the high performance today's "green" initiatives require without adding radical or expensive external components to the plumbing system.

## SHOWERS AND SHOWER HEADS

**M**etcraft offers our new 1.2 gpm shower head in a large variety of stainless steel shower panels and shower cabinets. Institutional applications for showers consume vast amounts of potable water 2.5 gpm is typical. The Metcraft PSH shower heads have a vandal resistant adjustable spray pattern that delivers a spray pattern at the 1.2 gpm. The PSH shower heads were also designed with a conical shape to inhibit their use as a tie hold for suicidal hanging attempts.

## BARIATRIC TOILET FIXTURES

**M**etcraft's bariatric 1.28 gpf toilet is the strongest fixture on the market. It looks like a standard commercial porcelain toilet, but it is actually powder coated color! The finish is so smooth, you wouldn't know that it is constructed of 14 gauge stainless steel. This toilet features Metcraft's new HET technology to give our customers the added advantage of water conservation. Metcraft's crevice-free design allows for ease of cleaning over traditional commercial porcelain toilets. It looks great, it's durable, it conserves water and it's easy to clean!
